- Search bar to find specific product.
- Each product item has Horizontal list (images of the product) and **plus** button for adding this product in **Cart**.
- Ability to select any product and add it to **Cart**.
- when add any product to cart there will be notification light in Cart tab.
- after finishing select items, doctor go to his **Cart** to confirm his order or for editing.

## Other products Category

- List of products that are not on the system and come from outside the country.
- These products come on request so user can buy them by contact the company.

## Ordering process

### Cart Page

- List of selected products.
- Ability to remove any item from list.
- Ability to add new item by return to **home page** and select new items.
- After finishing user press **Confirm order**.
- Popup page appears it contains two dropdown menus
  - first one: client choose his address (from his registered addresses)
  - second: client choose the nearest supplier to his location **V1** (in **V2** it will be automatic)

### Receipt

- Order details (number of items and prices)
- old amount due
- New receipt money after ordering.
- Client select nearest supplier to his location **V1**
- IN **V2** the system will automatically select nearest supplier to the client.
- Send button (this will reflect in admin **dashboard**, user **orders tab** and nearest **supplier**)

## My Orders Tap

- Doctor can view list of his orders (each order has its status)
  - the order has shipped
  - the order has reviewed but not shipped.
  - the order has reached his destination (there will be ability to add feedback to products)
- Select any order of the list:
  - status page of order (where my order now?)
  - Ability to edit this order by opening the **receipt Page** (by edit button)
  - From **receipt Page** you can go to (**edit page**) for edit your order
  - by confirming the order, this will reflect in **MY Order Page**
- There is some constrains of editing process that depends to **status** of the order:
  - if the status of order was (order has been shipped) then create new **receipt**
  - old **receipt** be removed **from my order Tap**
  - if the status of order was (order not shipped yet) then update old **receipt**
  - old **receipt** be updated **in my order Tap**

## Notifications

- After every delivering process there will be notifications to the client contains:
  - billings details of each delivered that help the user to be aware of his activities.
  - Every 30 days doctor will receive notification to remind him of his unpaid bills.
  - Offers notifications.
  - News.

## Doctor profile

- In this page user can review his personal information
- Billings records (uncompleted **receipts**).
  - select **receipts** tab from user profile
- The amount due.
- Number of orders
- Ability to request unavailable material on system.
- Settings

## Newsfeed

- In this page doctor will follow any news from medical media:
  - conferences
  - new medicines and so on...

## Flyboy

- After registration to system (by admin)
- If client sent an order the nearest (supplier)
- System automatic select the nearest ( supplier ) to the client **V2**
- After receiving the order flyboy has set of process to do:
  - there will be list of (**unconfirmed orders**)
  - flyboy starts to confirm this orders and change its status to (in progress)
  - this will reflect to client order status.
  - when order is delivered , flyboy change the status of the order in system to (delivered)
  - then go to billings page to enter client data

### There are several scenarios in this process:

#### 1- First scenario (case the doctor has old receipts not paid)

- Flyboy enter the money that doctor pay and press confirm.
- Money will be reduced from last **receipts**.
- If the doctor pays more than the bill price the extra money will be deducted from the old bills if there is money left it will remain in his account.
- If the doctor pays less than the bill price the money will be deducted from the old bills and there will be money to be paid in his account.
- Doctor payment will be **updated** in his personal account.

#### 2- Second scenario (case the doctor has no old receipts not paid)

- flyboy enter the money that doctor pay then press confirm.
- If the doctor pays the bill price the money will be deducted from the current bill and there will be no money to be paid.
- If the doctor pays more than the bill price the extra money will remain in his account.
- If the doctor pays less than the bill price the money will be deducted from the current bill and there will be money to be paid in his account.
